NGUYEN VAN MINH

Linux Kernel · Android · Hardware Hacking

Email: minhnguyen.080505@gmail.com
Portfolio: vn-lazyming.github.io/my-portfolio
GitHub: vn-lazyming
X: vn_lazyming

Education

- **Ho Chi Minh City University of Science (HCMUS), VNU-HCM** — Ho Chi Minh City, Vietnam
  B.Sc. in Information Technology — Honors Program (CLC) — *Sep. 2023 – Present*

Experience

- **Viettel Cyber Security** — Ho Chi Minh City, Vietnam
  Vulnerability Research Intern — *Feb. 2026 – Present*
  - Fuzzed Galaxy S26 kernel drivers (NPU, GPU) in QEMU with syzkaller.
  - Audited Linux kernel networking and KVM.

Vulnerability Research

- **Linux Kernel**
  - **CVE-2026-52943**: Linux kernel LPE on default config, UAF in `net/core/skbuff.c`. Found, exploited, and patched upstream.
  - **CVE-2026-64115**: Linux kernel UAF in `net/vmw_vsock/vmci_transport.c`. Found and patched upstream.
  - **CVE-2026-68081**: KVM guest-to-host permanent memory leak. Found and reported.
- **Android**
  - **Samsung Galaxy S26 kernel LPE**: 0-day, working exploit from an unprivileged app via Exynos NPU driver bugs. Reported.
  - **Android Notebook**: Android internals book for vulnerability researchers (vn-lazyming.github.io/android-notebook).
- **Hardware Hacking**
  - **Firmware extraction & hardware analysis**: Consumer devices (Sonos Era 100, Philips Hue Bridge, Wyze Cam Pan v3).

AI Engineering

- Build autonomous LLM agents for security work: Claude Code skills, MCP servers, multi-agent workflows that run unattended.
- Strong AI-assisted problem solving: ramp up fast on unfamiliar systems; studying AI engineering to scale vulnerability discovery.

Write-ups

- **CVE-2026-52943**: 0-day root cause and LPE exploit, UAF in `net/core/skbuff.c` (PoC).
- **CVE-2026-68081**: 0-day root cause, KVM guest-to-host memory leak in `arch/x86/kvm/vmx/nested.c`.
- **CVE-2025-21756**: n-day analysis, UAF in `net/vmw_vsock/af_vsock.c`.
- **CVE-2025-39682**: n-day analysis, refcount bug in `net/tls`.
- **CVE-2018-1160**: Netatalk pre-auth RCE analysis.
- **CVE-2016-9401**: Bash Revenge (pwnable.tw) exploit.

Awards

- **1st Place**, Wannagame Championship 2026 — national university CTF — *2026*
- **Consolation Prize, Group A**, Cyber Security Student Contest (CSC) 2026 — national student CTF, 334 teams — *Oct. 2026*
- **Google Patch Rewards**, $500 for the CVE-2026-52943 kernel fix — *Sep. 2026*
- **Consolation Prize**, Cyber Security Student Contest (CSCV) 2025 — national student CTF, 327 teams — *Nov. 2025*
- **Consolation Prize**, VSL CTF
- **Finalist**, HCMUS-CTF 2025 — *Aug. 2025*

Activities & Community

- **HCMUS-CTF 2026** — Ho Chi Minh City, Vietnam
  Problem Setter & Judge — *2026*
  - Authored pwn / reverse-engineering challenges.
- **Global Cybersecurity Camp (GCC) 2026** — Ho Chi Minh City, Vietnam
  Staff — *Mar. 2026*
  - International cybersecurity training program gathering top students from member countries.

Skills

- C, Python, x86-64 / ARM64 assembly · syzkaller, QEMU, KASAN / KCOV, GDB, IDA Pro
